

MIXER

MIXER

MIXER

The **Mixer Clean** mixer is an essential accessory for your on-farm dosing system, as it has been designed to achieve perfect homogenization of the stock solution.

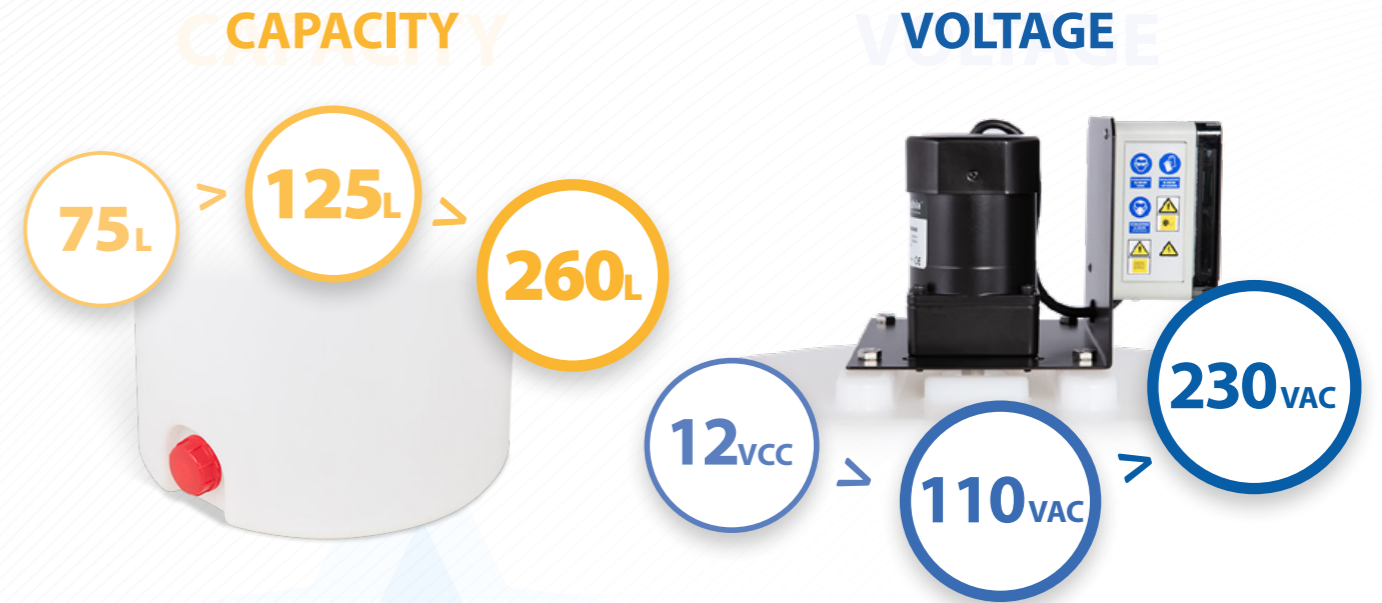

The key to its success lies in the combination of a number of core features that make it an efficient, high-capacity machine.

Gear motor

For precise dosing, use the low-speed anti-foam mixing system. The gear motor moves the propeller at low revolutions (200 rpm) to slowly stir the mixture without producing foam.

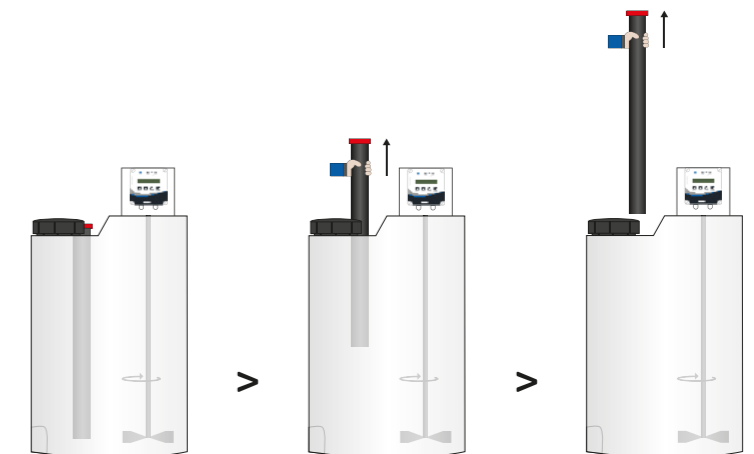

To adapt to the different needs of each installation, there are a variety of motors available with different voltages and tanks with different capacities.

Cleaning system

The high-flow lower cap allows the system to be emptied and cleaned quickly after use. The threaded connection allows for the installation of different accessories, such as our PVC-valve adapter for easy daily cleaning.

The suction assembly with the quick-release mechanism allows us to thoroughly clean the tube and suction system of the dosing pump. Cleaning can be carried out quickly and easily in continuous operation, without having to stop the application.
